
Pooled, the 8 signals favour **N** (5 of 8; P(C) = 0.23). The swarm announces **C** unanimously.

Agent 3 **overrides** its own signal: two revealed signals outweigh one.

Captured: copy the majority whatever the signal. **Deaf:** follow the signal whatever the majority. **Bayesian:** override exactly at an informative lead of 2, and report 0.65 or 0.86, not the naive count's 0.98.
